DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18 and 37, drawn to a signal transmitting member, classified in class 439, subclass 82.
 - II. Claims 19-26, drawn to a support member, classified in class 439, subclass 709.
 - III. Claims 27-36, drawn to a circuit structure, classified in class 439, subclass 70.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, **invention I** has separate utility such as the signal member can be used in any support member, for example a connector housing. And **invention II** has separate utility such as the support member can be used with any type pin, for example a pressfit pin. See MPEP § 806.05(d).
3. Inventions **III and I** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the circuit

Art Unit: 2833

structure does not require the pin to have a central elongated body. The subcombination has separate utility such as the signal transmitting member can be used in any circuit assembly.

4. Inventions **III and II** are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the circuit structure does not require the support member to be organic plastic. The subcombination has separate utility such as the support member can be used in any circuit structure.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Peter Scott on March 11, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
